

6.1

select $B_1.sid, B_2.sid$
from catalog $B_1, catalog B_2$
where $(B_1.pid = B_2.pid) \text{ AND } (B_1.sid = B_2.sid) \text{ AND}$
 $(B_1.price > B_2.price)$

6.2

select $s_1.sid$
from suppliers s_1
where $s_1.address = 'Ruston city'$ OR
 $s_1.sid \text{ IN } (select c_1.sid$
FROM part $P_1, catalog C_1$
where $P_1.color = 'red'$ and
 $P_1.pid = C_1.pid)$

8.1) compute the candidate keys:

given fd; $Hscode \rightarrow Hsname, Hscity$

$Hscode^+$: $Hscode, Hsname, Hscity$

GPA^+ : $GPA, priority$

SSN^+ : $SSN, sname, saddres, GPA$.

$SSN, Hscode^+$: $sname, saddres, GPA, priority, Hscode, Hsname, Hscity$.

$\therefore SSN, Hscode$ is a primary key

$Hscode \rightarrow Hsname, Hscity$ (p.d)

$SSN \rightarrow sname, saddres, GPA$ (p.d)

$GPA \rightarrow priority$ (non-prime) - violation of BCNF.

using $GPA \rightarrow priority$

$\rightarrow R_1(GPA, priority)$

$\rightarrow R_2(GPA, Hscity, Hsname, Hscode, saddres, sname, SSN)$

using $SSN \rightarrow sname, saddres, GPA$

$\rightarrow R_{21}(SSN, sname, saddres, GPA)$

$\rightarrow R_{22}(SSN, Hscity, Hsname, Hscode)$

using $Hscode \rightarrow Hsname, Hscity$

$R_{221}(Hscode, Hsname, Hscity)$

$R_{222}(Hscode, SSN)$.

so, $R_1(GPA, priority)$, $R_{21}(SSN, sname, saddres, GPA)$,

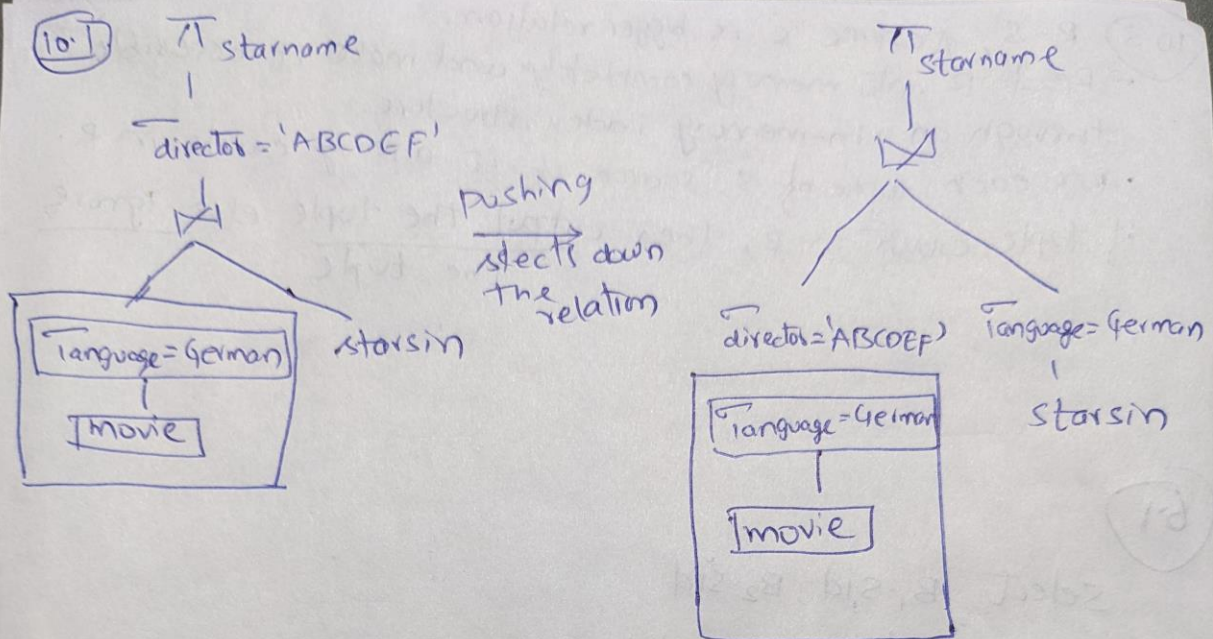

$R_{221}(Hscode, Hsname, Hscity)$, $R_{222}(Hscode, SSN)$ are BCNF.

$R_1, R_{21}, R_{221}, R_{222}$

8.2

Checks on parse tree

- 1) Syntactic checks: Is the syntax of every operator correct?
- 2) Entity checks: does every relation name refer to a valid relation?
- 3) View expansion: if a relation name refers to a view replace the relation node with the parse tree of the view
- 4) Attribute checks: does every attribute name refer to valid attributes?
- 5) Type checks: does each attribute participating in an expression have the proper type?

10.2 Compute candidate key

$A^+ = ABC$, $A^+ = ABC$, $AE^+ = AEBCD$,
 $AEF^+ = AEFBCD$, AEF covers all, AEF is a candidate key

$A \rightarrow B$ (pd), $A \rightarrow C$ (pd), $AE \rightarrow D$ (pd)

using $\boxed{A \rightarrow B}$

- $\rightarrow R_1(ABC)$
- $\rightarrow R_2(ACDEFG)$

using $\boxed{A \rightarrow C}$

- $\rightarrow R_{21}(AC)$
- $\rightarrow R_{22}(ADEFG)$

using $\boxed{AE \rightarrow D}$

- $\rightarrow R_{221}(AED)$
- $\rightarrow \boxed{R_{22}(AEFG)}$

$R_1(ABC)$, $R_2(AED)$, $R_3(AEFG)$ are in BCNF.

10-3 R-S, Assume 'S' is bigger relation.
 → Read 'R' into memory completely and make it accessible through an in-memory index structure.
 • For each tuple of S, search if it already exists in R.
 If tuple exists in R, then output the tuple else ignore the tuple.

9.1

CWID	Name	^R Subject	location	score
10156731	John	computer/w	Ruston	96
10145221	John	DBMS	Ruston	100

R ₁			R ₂		
CWID	Name	Subject	CWID	location	score
10156731	John	CN	10156731	Ruston	96
10145221	John	DBMS	10145221	Ruston	100

R ₁ ∪ R ₂				
CWID	Name	Subject	location	score
10156731	John	CN	Ruston	96
10145221	John	DBMS	Ruston	100

- (i) $R_1 \cup R_2 = R$.
- (ii) $R_1 \cap R_2 = \text{CWID}$ i.e. $R_1 \cap R_2 \neq \emptyset$
- (iii) $R_1 \cap R_2 = \text{CWID}$, with CWID we can access the R₁ (for deletion) i.e. CWID, Name, Subject (CR)
- The ① satisfies all the three rules, it is a lossless join.

2.

R_1			
CWID	name	location	score
1056731	John	Puston	96
1045221	John	Puston	100

R_2	
location	score
Puston	96
Puston	100

(i) $R_1 \cup R_2 =$

CWID	name	location	score
1056731	John	Puston	96
1045221	John	Puston	100

$$R_1 \cup R_2 \neq R$$

(ii) $R_1 \cap R_2 =$

location	score
Puston	96
Puston	100

$R_1 \cap R_2 \neq \emptyset$

(iii) $R_1 \cap R_2 = R_2 \rightarrow$ it gives R_2 , ~~if~~

The relations ^{must and} should satisfy the three rules to become a lossless join, so the above (2) doesn't satisfy, so it is a lossy join.

\therefore 1 is a lossless and 2 is a lossy join

Q.2 Report (RID, title, AID, Author, subject)

$RID \rightarrow title$
 $title \rightarrow subject$
 $AID \rightarrow Author$

So Ans: edge diagram to find the candidate key

Closure of RID, AID^+ : $RID, AID, Author, Title, subject$

RID, AID is a candidate key.

$RID \rightarrow title$ (partial dependency)
 $title \rightarrow subject$ (transitive dependency)
 $AID \rightarrow Author$ (partial dependency)

R_1, R_{21}, R_{22}, R_3 are in 3NF.
